# 1. Safety precautions and warnings

Read all instructions before using this appliance in order to avoid risk of accident or possible damage.

## Warning/Caution

### Warning

This symbol is intended to alert the user to the possible death or injury.

### Caution

This symbol is intended to alert the user to the possible injury or damage.

## Description of symbols

Indicates prohibition

Do not disassemble

Do not contact

Adhere to the instruction strictly

Unplug from the electrical outlet

Earth the appliance to avoid the risk of an electric shock

## Warning

**Do not plug multiple electrical appliances into the same outlet.**

- This may cause abnormal heating or a fire hazard.

Prohibition

**Do not attempt to make repairs yourself.**

- This could lead to fire hazard or abnormal operation causing severe personal injury.

Do not disassemble

**Make sure the power cord is not crushed or damaged.**

- Repair immediately all power cords or outlets that have become frayed or otherwise damaged.

**Check the operating environment.**

- Do not install the refrigerator in a humid (with condensation) location or on an unstable surface.

**Do not attempt to make repairs yourself.**

- This could lead to fire hazard or abnormal operation causing severe personal injury.

Earth

**Make sure the power cord is not crushed or damaged.**

- Repair immediately all power cords or outlets that have become frayed or otherwise damaged.

Unplug

# **Caution**

**Do not store bottled food or drinks in the freezer compartment.**

- Bottles may explode causing personal injury.

Prohibition

**Do not store food in an unstable manner.**

- Opening the door may trigger loose items to slip and cause injury.

Prohibition

**Do not store anything other than food in the refrigerator.**

- Medical supplies which need to be under strict temperature control should not be stored in the refrigerator.

Prohibition

**Do not put anything on top of the refrigerator.**

- Opening or closing the door may trigger loose items to slip and cause injury.

Prohibition

**When replacing electric components, be sure to use rated components.**

- Check the model, rated voltage, rated current, operating temperature etc. of the component.

**When servicing the refrigerator, completely remove dust or foreign substances from the housing, electric connections and etc.**

- This can protect against the risk of fire hazard caused by tracking and short circuit.

**When servicing the refrigerator, completely remove dust or foreign substances from the housing, electric connections and etc.**

- This can protect against the risk of fire hazard caused by tracking and short circuit.

**After servicing the refrigerator, be sure to check the components are reassembled in a correct manner.**

- The serviced unit should be reassembled and returned to its original assembly state.

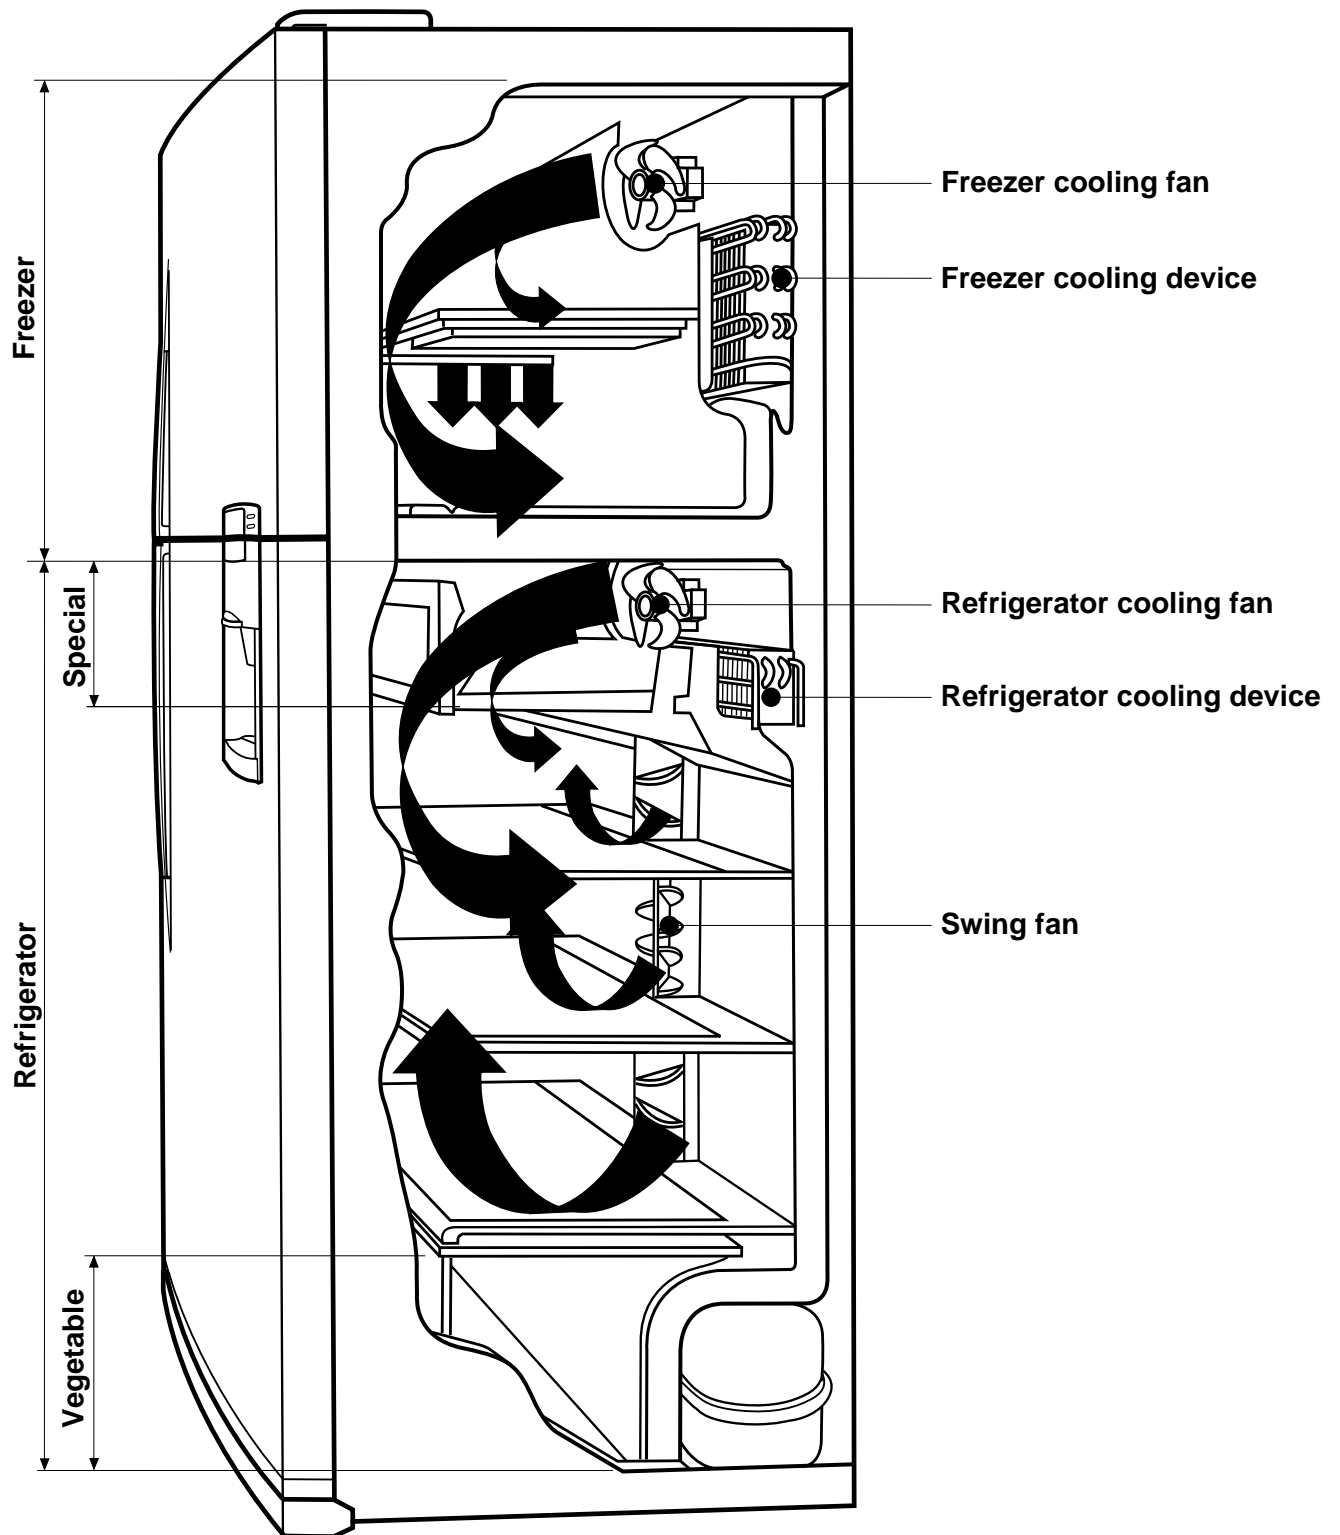

**Check the electrical parts for the trace of moisture penetration.**

- When the trace of moisture penetration is detected, replace the part or try insulation tapping.

## 6. Air circulation route

## 2. Product Specifications

ITEM		STANDARD					
Model Name		SR-606EV	SR-608EV	SR-646EV	SR-648EV	SR-686EV	SR-688EV
Net Capacity  (//CU.FT)	Total	504	499	544	538	581	575

SR-688EA	1140.5	600	1810.5	1847.5	'b' applied

## 7-2 The name of each parts and disassemble method

### Freezer shelf

- Up the front of shelf to direction ① then pull and apart to direction ②.

- Push to direction ① and apart to direction ②.

### Chilled room shelf

- Pull to the arrow direction then up and apart at the locking point.

- Up and apart as showed.  
(concerned model : SR-5066/5466/5866)

### Shelf REF.

- Pull with both hands as showed.
- The height can be adjusted according to the stored bowls.

### Vegetable box and cover

- Up the cover and apart then pull out the vegetable box at the mid-point and up and and pull to apart.

## 7-3 Freezing cycle

COMPRESSOR   SUB CONDENSER   CLUSTER PIPE   HOT PIPE   DRYER   CAPILLARY  
TUBE   REFRIGERATOR EVAPORATOR   FREEZER EVAPORATOR   ACCUMULATOR  
SUCTION PIPE   COMPRESSOR

## 7-4 PANEL display

## 7-5 Temperature control

### 1) Freezer temperature control

1. It consists of five steps as follows and selected by one button.  
Mid → Mid.High → High → Low → Low.Mid
2. It is circulated and displayed one by one by pressing the button.
3. At first power on it is selected "Mid"

Category	Initial power on	Pressed once	Pressed twice	Pressed 3 times	Pressed 4 times	Remark
Indicator Lamp	▶ Mid	▶ Mid·High	▶ High	▶ Low	▶ Low·Mid	
Reference Temp.	-18°C	-19.5°C	-21°C	-15°C	-16.5°C	

### 2) Temperature control in the refrigerating compartment

- 1) Select the 5 stages of 'Mid'-'Mid · High'-'High'-'Low'-'Low · Mid' with a button.
- 2) Whenever the temperature control button of refrigerator is pressed, it continues of light from 'Mid'-'Mid · High'-'High'-'Low'-'Low · Mid'.
- 3) When power turns on "Mid" is automatically selected.

Category	Initial power on	Pressed once	Pressed twice	Pressed 3 times	Pressed 4 times	Remark
Indicator Lamp	▶ Mid	▶ Mid·High	▶ High	▶ Low	▶ Low·Mid	
Reference Temp.	3°C	1°C	-1°C	6°C	4.5°C	

## 7-6. Power freeze and Power

---

- Selected by additional quick freeze & refrigeration button.
- The lamp of quick freeze and refrigeration circulated everytime it pushed.
- No change of setting temperature occurred during quick freeze and refrigeration selected.
- Temperature of freezer and refrigerator can be re-setted while quick freeze and refrigeration operates.

### 1) Quick freeze

- (1) Comp. and F-fan runs continuously for two and a half hours when quick freeze selected. ( one minute after selection )
- (2) During quick freezing the refrigerator controlled by setted notch.

### 2) Quick refrigeration

- (1) Comp. and R-fan runs until the temperature of refrigerator reaches  $-4^{\circ}\text{C}$  when quick refrigeration selected.
- (2) After the temperature reaches  $-4^{\circ}\text{C}$  the 'HIGH' notch runs for an hour and finish quick refrigeration.
- (3) Unless the temperature of refrigerator reaches  $-4^{\circ}\text{C}$  within two and a half hours quick refrigeration stopped.

### 3) When quick freeze and refrigeration selected at the same time

- (1) Each function applied at the same time. Quick freeze runs Comp. and F-fan for two and a half hours and quick refrigeration runs Comp. and R-fan for two and a half hours with no relation of each other.

## 7-7 Alarming

---

### 1) Button touch ("Ding-Dong" sound)

- (1) Everytime the button pushed, the input confirmation, "Ding-Dong", sounds.
- (2) Not sounds, if two keys are pushed at the same time or wrongly handled.

### 2) Door-Open warning ("Ding-Dong" sound)

- (1) Two minutes after door opened, ten times of alarming sounds.
- (2) If door opened continuously, ten times of alarming sounds with one minute cycle.
- (3) Alarming stopped just after door closed.

### 3) Forced operating and defrosting ("Beep" sound)

- (1) If forced function selected the "beep" sounds.
- (2) Alarming sounds untill the forced operating canceled by automatically ( 24Hr ) or manually.
- (3) Alarming sounds untill the forced defrosting canceled by automatically ( 24Hr ) or manually.

## 7-8 Defrosting

---

- 1) From the first power on, defrosting started after 4 hours of total Comp on time.
- 2) After that defrosting cycle can be varied from 6 hours to 32hours. (Comp on time)

## 7-9 Testing

---

- Testing is for PCB, product, function and service.
- After testing, turn the power on to start self diagnosis.

### 1) Forced operating

- (1) As the button on PCB pushed once, Comp starts immediately without 5 minutes delay.
- (2) If forced operating selected the notch of freezer and refrigerator fixed to "HIGH" and "MID-HIGH". Then Comp and F-fan is controlled to pull-down and R-fan is controlled to "MID-HIGH" notch.
- (3) Pull-down maintained just for 24 hours during forced operating, after that automatically defrost freezer and refrigerator and then starts normal operating.
- (4) Turn the power off or select test cancel mode to cancel the forced operating.
- (5) Alarming (0.25 sec on/0.75 sec off) continues until the forced operating finished. It continues without any relations to alarming key selection or cancel.

### 2) Forced defrosting

- (1) Push the test button one more time to run the forced defrosting of refrigerator.
- (2) One more push in the above status will run defrosting of freezer and refrigerator simultaneously.
- (3) Forced operating cancelled automatically by starting forced defrosting and return to normal operating after completion of defrosting.

### 3) Test cancel mode

- (1) One more push in the status of forced defrosting of F/R will run normal operating.
- (2) Alarming stopped in the test cancel mode.

## 7-10 Self diagnosis

---

### 1) Self diagnosis at first power on

- (1) As the power applied to the refrigerator first time, all displays show and run the self diagnosis.
- (2) If no problems founded display returns to normal model.
- (3) If problem is founded, on and off the related display lamp and start alarming.
- (4) Lamp displayed until the problem solved or self diagnosis cancelled.
- (5) After problem solved the display mode return to normal.

(6) When refrigerator repaired, sure to power off and on to run self diagnosis.

(7) Refer to belows for problems and related displays.

No	Item	Display LED	Symptom	Remark
1	R1-Sensor	Refrigerator "Low"	<ul style="list-style-type: none"> <li>• R-room left sensor housing disconnection.</li> <li>• Faulty connection.</li> <li>• Wire open or short.</li> <li>• Faulty sensor.</li> </ul>	R1-Sensor temperature is over +50°C or below -50°C.
2	R2-Sensor	Refrigerator "Low · Mid"	<ul style="list-style-type: none"> <li>• R-room left right sensor housing disconnection.</li> <li>• Faulty connection.</li> <li>• Wire open or short.</li> <li>• Faulty sensor.</li> </ul>	R2-Sensor temperature is over +50°C or below -50°C.
3	RD-Sensor	Refrigerator "Mid"	<ul style="list-style-type: none"> <li>• R-room defrost sensor housing disconnection.</li> <li>• Faulty connection.</li> <li>• Wire open or short.</li> <li>• Faulty sensor.</li> </ul>	RD-Sensor temperature is over +50°C or below -50°C.
4	Room-Temp. Sensor	Freezer "Low"	<ul style="list-style-type: none"> <li>• Room-Temp sensor housing disconnection.</li> <li>• Faulty connection.</li> <li>• Wire open or short.</li> <li>• Faulty sensor.</li> </ul>	Room-Temp Sensor temperature is over +50°C or below -50°C.
5	F-Sensor	Freezer "Low"	<ul style="list-style-type: none"> <li>• F-room sensor housing disconnection.</li> <li>• Faulty connection</li> <li>• Wire open or short.</li> <li>• Faulty sensor.</li> </ul>	F-Sensor temperature is over +50°C or below -50°C.
6	FD-Sensor	Freezer "Mid"	<ul style="list-style-type: none"> <li>• R-room defrost sensor housing disconnection.</li> <li>• Faulty connection.</li> <li>• Wire open or short.</li> <li>• Faulty sensor.</li> </ul>	F-Sensor temperature is over +50°C or below -50°C.
7	Geared-Motor	Refrigerator "High"	<ul style="list-style-type: none"> <li>• Faulty geared-motor</li> <li>• Faulty reed-switch housing disconnection.</li> <li>• Faulty connection.</li> </ul>	Square wave not detected by reed-S/W.

(Self-diagnosis Display Table)

## 7-11 Load status display

- 1) Press power F/R key for five seconds then press temperature control key in the refrigerator after temperature display lamps on and off three times.
- 2) This mode shows which load is being sourced signal from MICOM currently. This doesn't mean the load is operating but just show MICOM signal output. The Compressor may not operate due to the open wire or relay missing though the display shows the Compressor operating.
- 3) Load status display return to normal mode after sixty seconds.
- 4) Follows are load status and related display.

No	Item	Display LED	Display	Remark

12	Low temp.	High humidity refrigeration	Relevant LED On when ROOM temperature is below 20°C	

(Load Status Display Table)

---

## 11. Disassemble and assemble method

---

### 11-1 Refrigerator inside lamp replacement

---

- 1) Remove the screw with (+) driver and push the cover to the arrow direction and apart.

- 2) Remove out the lamp to the arrow direction and replace with new one. ( Left & Right )

- 3) Insert the front of the cover first and screw it.

### 11-2 Freezer inside lamp replacement

---

- Grab the the salient part of cover and pull it down to apart. Replace the 220V/15W lamp and insert front of cover first and then fix it.

## 11-3 Disassemble of refrigerator cooling part

- 1) Remove foods and shelves inside the refrigerator.

- 2) Pull out the chilled room box to the arrow direction and pull it up to apart at the locking point.

- 3) Push the right arrow part of the chilled room inside and apart the chilled room cover.

- 4) Up the cover of vegetable box and pull apart then pull it out.

- 5) Remove the screws with (-) driver.

- 6) Release the locking part using (-) driver as shown.

- 7) Pull out the cover front part.

8) Disassemble the wire housing of motor in the center.

9) Pull the housing part and disassemble the wire terminal.

10) Remove screws of duct and pull apart.

11) Release wire terminal on top of the left.

12) Remove screws of evap. Cover rear and release the locking part of both left and right using (-) driver.

## Cooling cycle unit assembly in the refrigerating compartment

## Cooling cycle unit cover assembly in the refrigerating compartment

## Rotating duct assembly in the refrigerating compartment

## 11-4 Disassemble of cooling part in the freezing room

1) Pull out the shelf.

2) Remove screws of evap cover and pull apart.

3) Disconnect the each terminal of wire housing on top of the left side.

4) Remove screws of evap. Cover rear and release the locking point using (-) driver.

Residual spread preventer

Assembly of the cooling cycle unit in the freezer

## 11-5 Assembling specifications of machinery room

---

1. remove screws of compressor cover

2. Assembling specifications of machinery room

## 11-6 Assembling specifications of power supply part

1. Turn off the power of refrigerator.

2. Remove the cover using (-) driver.

3. Assembling specifications of power supply part

## 11-7 Disassembling method and order of water dispenser

### 1. Disassembling method and order of cock part

- 1-1. Open the door and detach the water tank. Throw away waters in the tank.
- 1-2. Turn the cock on the bottom of the water tank to counterclockwise and apart.
- 1-3. Push part 6 to arrow direction and apart part 2 then part 5,6 automatically apared. Puch the locking point to arrow direcion to apart part 3.
- 1) Be careful not to damage the parts 1,2,5,7 ( It may cause a leak of water. )
- 2) Assembling is reverse of the disassembling order.

### 2. Disassembling method and order of lever

- 2-1. Close the door and turn the screw of the bottom of cover dispenser to counterclockwise using (+) driver and pull out to arrow direction and apart the cover.
- 2-2. Release locking point of lever dispenser using (-) driver to the arrow direction and apart spring and lever dispenser.
- 2-3. Push locking point using (-) driver and pull out key-lock to upside then apart dispenser locking device.
- 2-4. Assembling is reverse of the disassembling order after inserting the spring to lever shaft.

## 11-8 The operating theory and order of water dispenser

1. Push the knob lever(1-1) to the arrow direction.
2. Lever dispenser(1-2) rotates around spring-lever(1-3) to the counterclockwise and push guide pin(2-1) and press the spring dispenser(2-2) vertically.
3. O-ring(big)(2-4) inserted in guide-push(2-3) moves vertically and aparts from cock-dispenser(2-5) then water flows through path of guide-pin(2-1) to the cup.
4. O-ring(small)(2-6) inserted in guide-pin(2-1) also aparts from guide-push(2-3) to let air go through that helps water flowing.
5. Stop pushing knob lever(1-1) when water filled to certain point.
6. Lever-dispenser returns by expansive force of spring-dispenser(2-2) and spring-lever(1-3) .
7. Guide-push(2-2), guide-pin(2-1), o-ring(small)(2-6) and o-ring(big)(2-4) also retun and contact cock-dispenser(2-5) then return to initial state.

WATER-DISPENSER

## 11-10 General diagnosis of water dispenser

## 8. Circuit operating theory

### 8-1 Power supply part

Voltage	Circuit used
— +12 (DC 12V)	Relay Operation
— Vcc (DC 5V)	Power around MICOM & Sensor Detector
— V12 (DC 12V)	LED Display & S/W Detector

Secondary voltage output of DC trans is sourced 1~3 and 5~7 about 15V. On the 'a' part, input is rectified and regulated by MC 7812 and is about DC12V. This voltage is applied for relay running and regulated again by 7805 to transformer. DC 5V is applied to display part after rectified and regulated by MC7812.

### 8-2 Resetpart

Reset part is initialize RAM of MICOM and others when power is on or power is interrupted for some time. It will make whole program runs from the first status. When power is supplied, reset voltage is "low" status for a few seconds and turn into "High" status in the normal operating.

### 8-3 Door S/W sensing part

DOOR	Door Conditions	Door S/W Contact	CON06 PIN NO	Micom Input Voltage
F	CLOSE	CLOSE	1	"HIGH"
	OPEN	OPEN		"LOW"
R	CLOSE	CLOSE	3	"HIGH"
	OPEN	OPEN		"LOW"

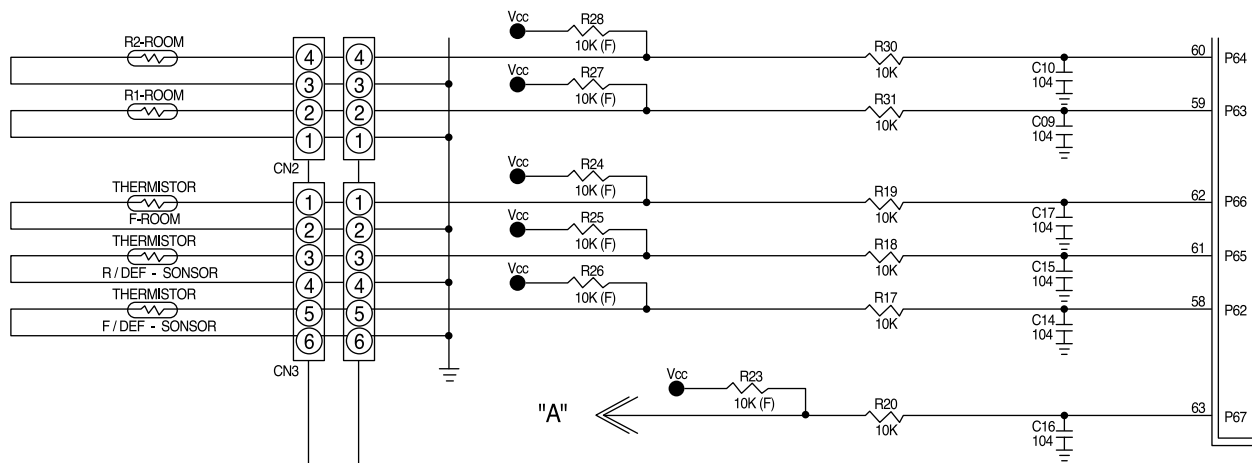

- 1) When the door is opened, the door S/W closed and MICOM input is 'Low'.  
Then the door-open is sensed.
- 2) When the door is closed, the door S/W is opened and MICOM input is 'high'.  
Then the door closed is sensed.

### 8-4 "V" motor, location sensing part ( Reed S/W)

- 1) "V" motor's location sensing which is for G.A. fuzzy control is done by reed S/W.
- 2) There occurs a "high" to "Low" and "Low" to "High" conversion period on con02 pin6 by the motion of swing fan. "V" motor's location is detected by it

## 8-5. Temp. sensing part

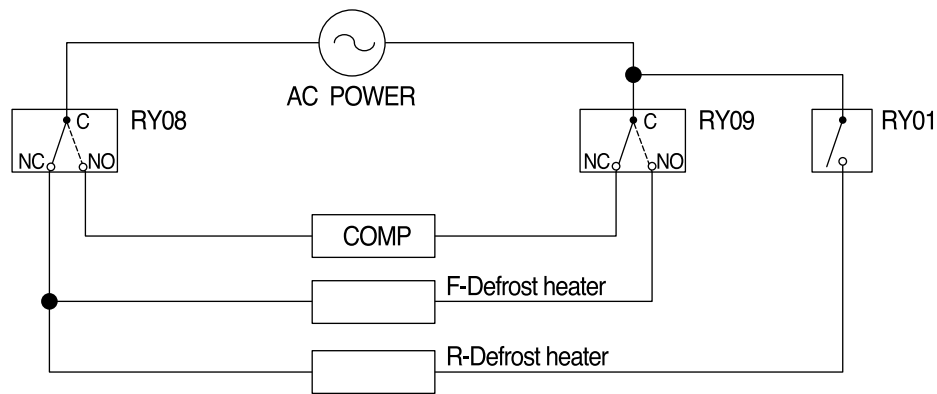

(Room Temp Sensor)

When Sensor is opened	When sensor is cut off
MICOM input "HIGH"	MICOM input "LOW"

- 1) Thermistor is used for sensing which has negative resistance coefficient to the temperature.
- 2) MICOM input voltage,  $V_F$  of sensor is  $V_F = \frac{R_{TH}}{R_{TH} + R_{24}} \times V_{CC}$  ( $V_{CC}$ : 5V,  $R_{th}$  : Sensor resistance)
- 3) Refer to conversion table for  $V_F$  and  $R_{TH}$  according to temperature.

## 8-6 Comp and defrosting heater operating

As it is seen above block diagram, 220V line is connected to the commons of Comp relay, Ry78 and defrosting heater relay, Ry77, Ry71. When those relays are off state Comp and defrosting heater are also off. As Comp relay moves to on and AC 220V applied to Comp load it starts operating. On the other hand defrost heater runs if defrost heater relay moves to on. There is no chance that both Comp and defrost heater runs together so it's useful for safety aspect.

RELAY		Load	Remark
COMP	Defrost H		
ON	OFF	Comp Operation	Defrost-Heater Power Off
ON	OFF	Comp off, Defrost-Heater Off	
ON	OFF	Defrost-Heater On	Comp Power Off
ON	OFF	Comp Off, Defrost-Heater Off	

## 9. Failure diagnosis and repairment

### Main PCB check

- Turn the power off and on again for self diagnosis check.
- Refer to belows for error code table

Error code table

Item	Display “LOW”	“LOW.Mid”	“Mid”	“Mid.HIGH”	“LOW”
Refrigerator	R1 sensor	R2 sensor	R Defro. sensor	—	Swing fan motor
Freezer	Room Temp sensor	F sensor	F Defro. sensor	—	—

CONTROL BOX

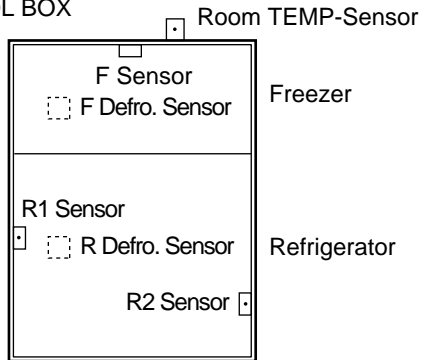

Table for Vf and Rth according to temperature

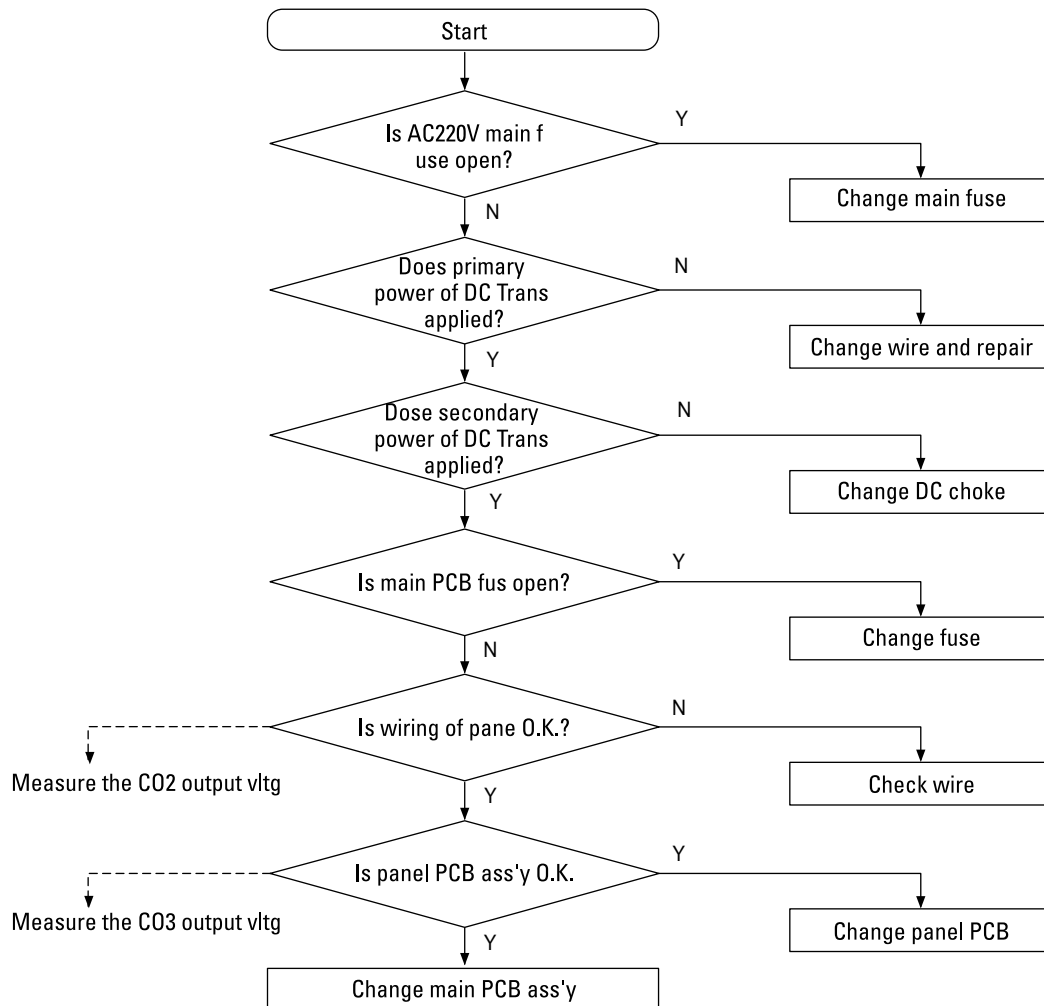

T(°C)	R(ohm)	V(v)	T(°C)	R(ohm)	V(v)

### Check in advance

1. Check the power of consent and power code.
2. Check it based on the “References” on the next pages.

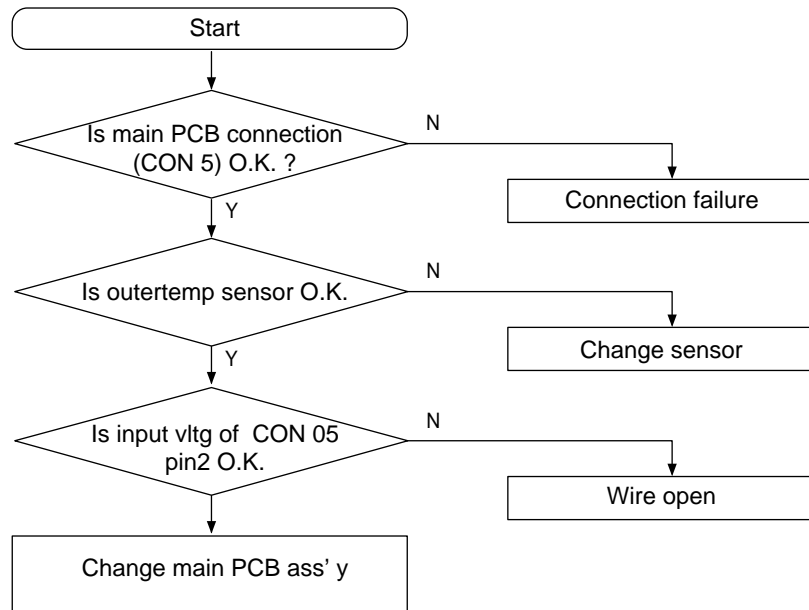

## 9-1 No Input Power

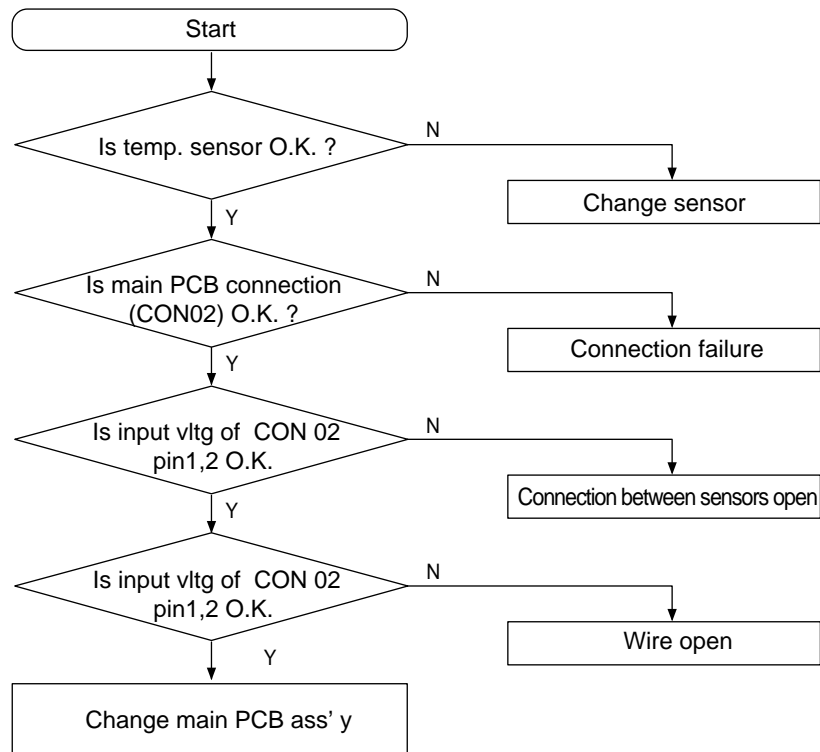

## 9-2 Self diagnosis failure

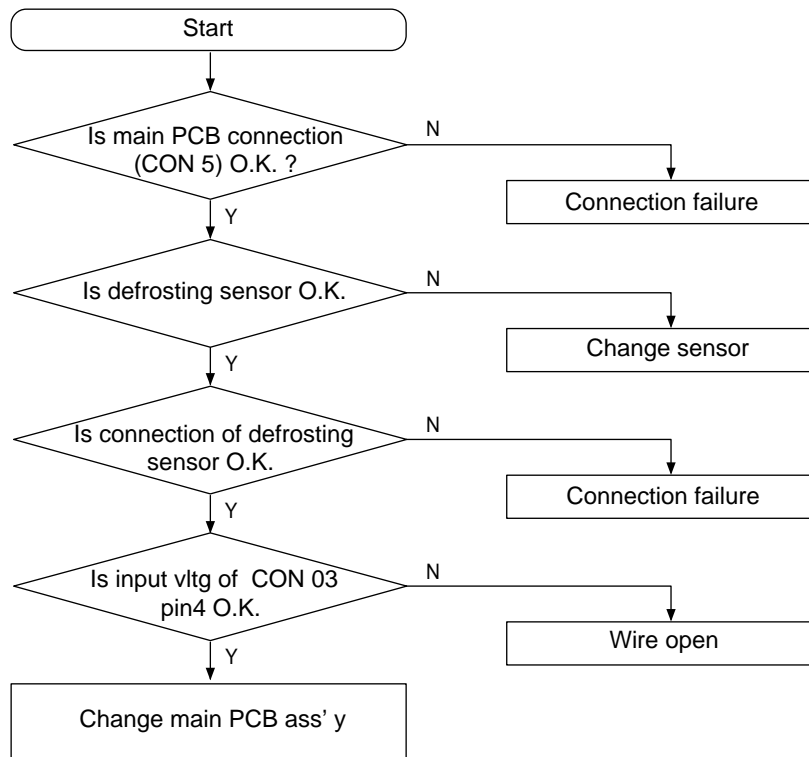

### 1) Outer temperature sensor failure

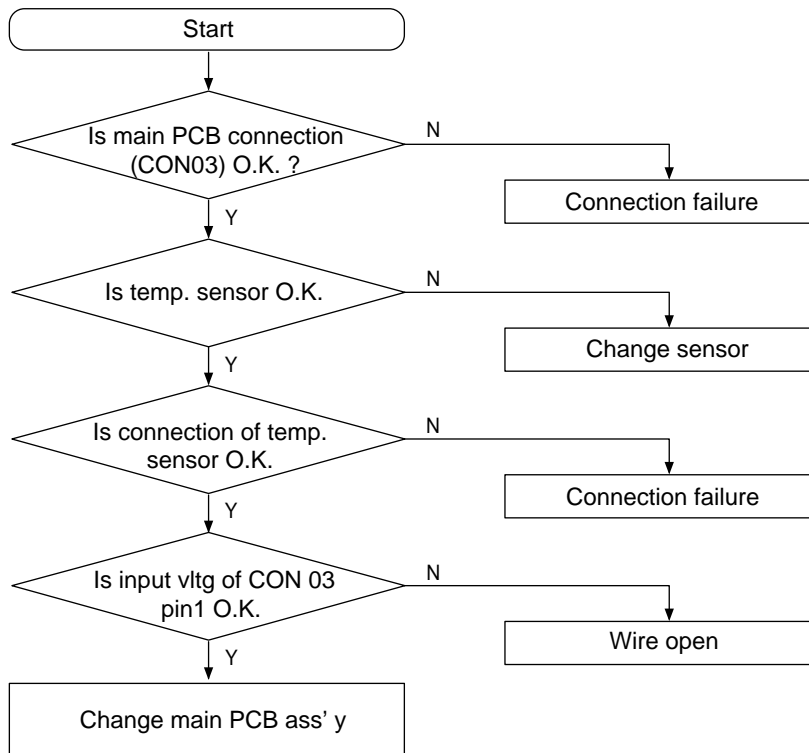

### 2) R1, R2, refrigerator temp. sensor failure

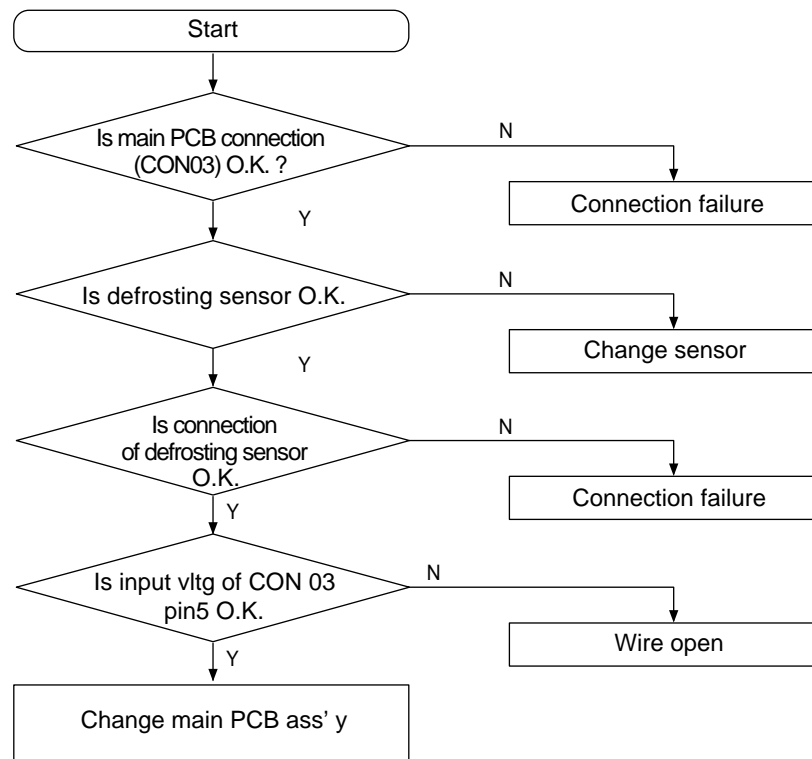

### 3) Refrigerator' s defrosting sensor failure

### 4) F1, Freezer temp. sensor failure

## 5) Freezer' s defrosting sensor failure

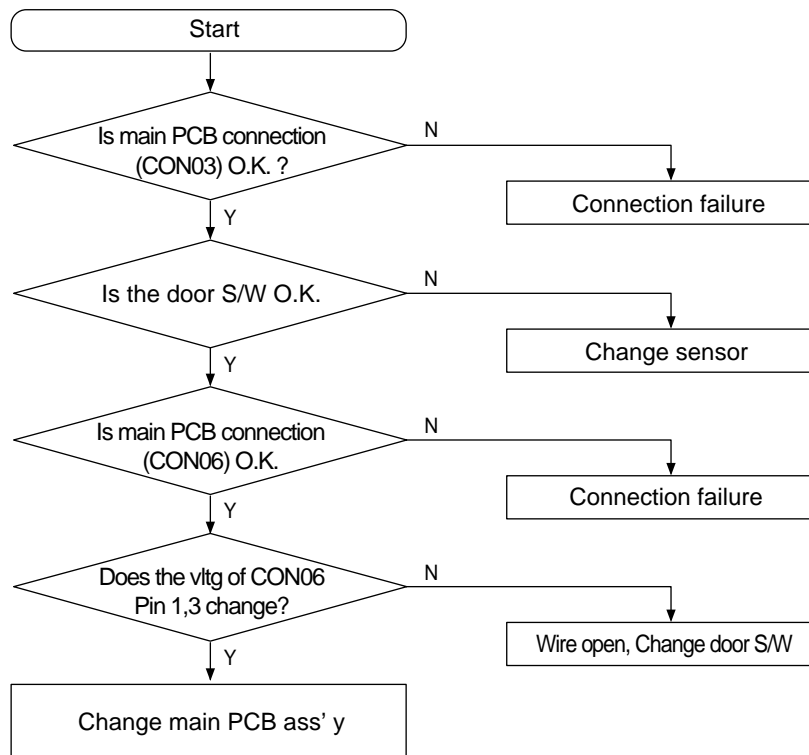

## 9-3 In case of continuous alarming

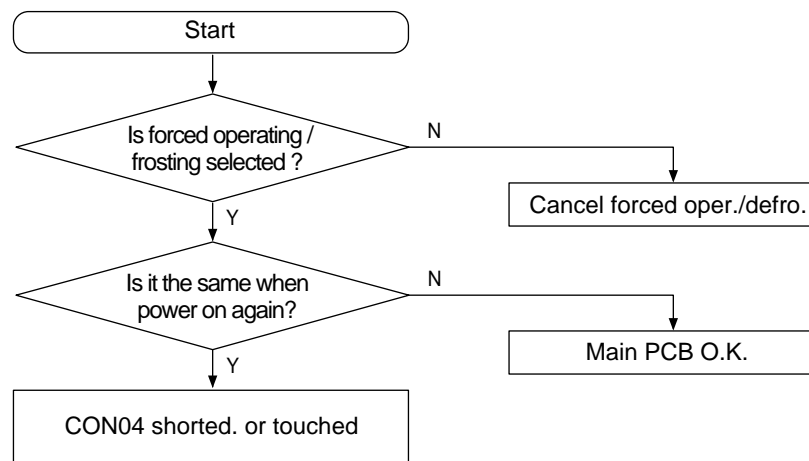

### references

- F/R door open alarms for ten seconds after 2 minutes later. If door opens continuously, door open alarms for ten seconds with one minute cycle. ( ten times of “Ding-Dong”)
- If there is moisture in door S/W, it is shorted and alarms due to the MICOM’s misjudgement. In this case the inside lamps of freezer and refrigerator turns off so the lamp do not turns on though you open the door.
- If the door S/W is rusted, the signal of door open do not reach to MICOM and no alarms and lamps turned off continuously.

### 1) In case of “Ding-Dong” alarming

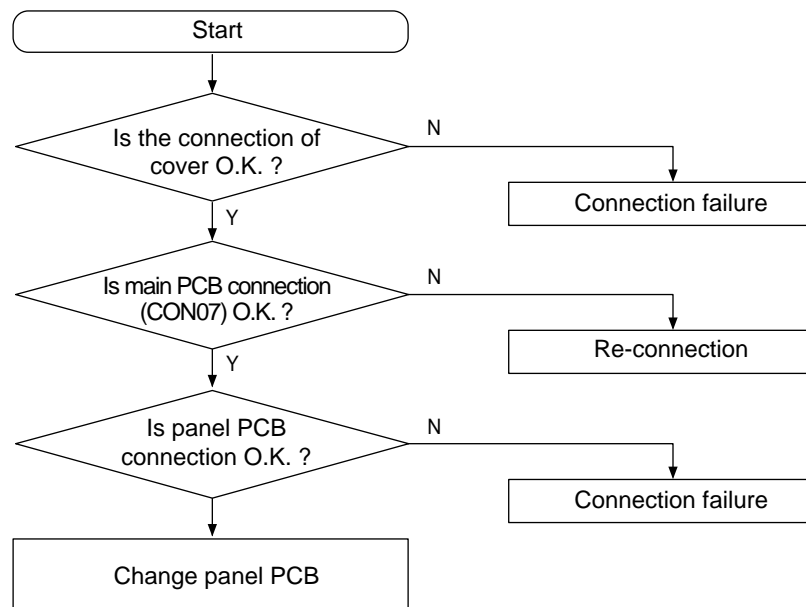

## 2) In case of “Beep-Beep” alarming

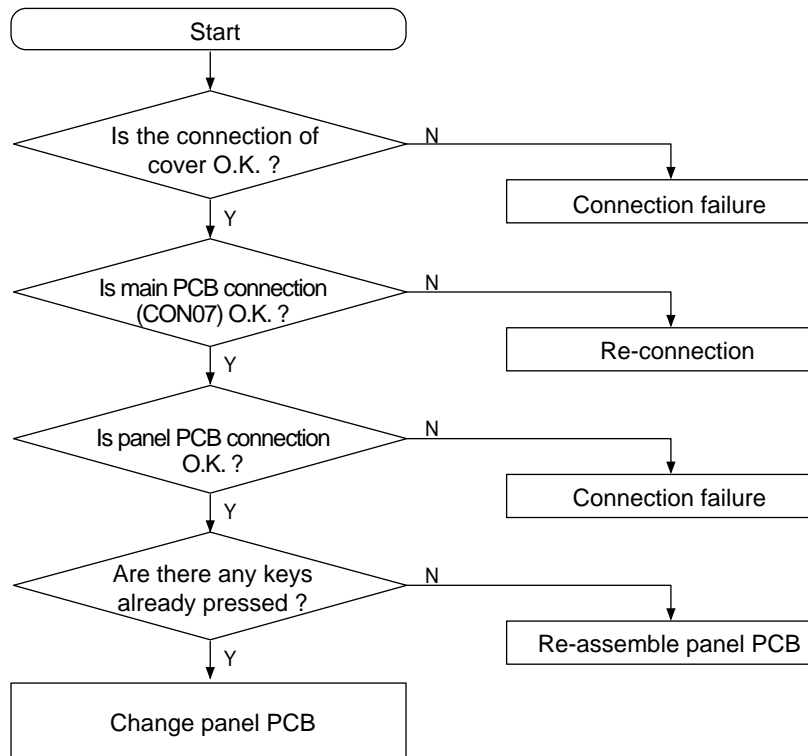

### references

- There is no “beep-beep” alarming except the forced defrost or sensing trouble during self diagnosis.
- If self diagnosis sensed trouble, it is displayed on the panel PCB, so easy to check. If not, the forced defrost or forced operation is selected the notch status are “High”-“Mid.High” at that time.

## 3) In case of no panel PCB display

#### 4) In case of the panel PCB key selection is impossible

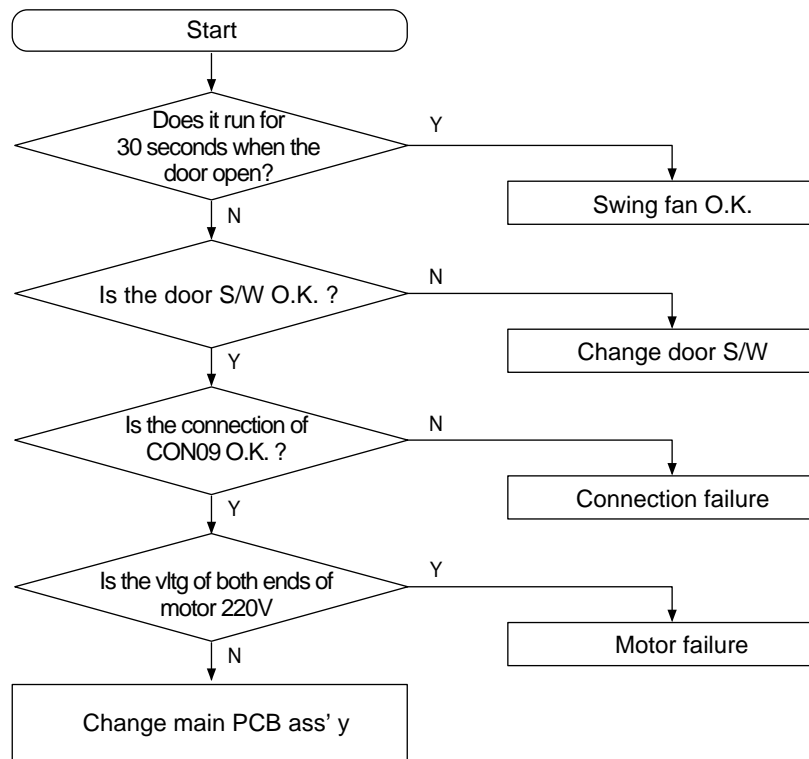

### 9-4 In case of fan do not run

#### references

‘Be sure to check cooling fan under forced operation.’

1. F-fan, R-fan and Comp cooling fan are off when Comp is off.
2. Though the Comp is on, the R-fan is not always on because the fan is off when the temperature was reached to the set point.
3. There is delaying time to run the fan after door open (Comp on state) . The delay time varies from ten seconds to one minute. (Forced operation included)

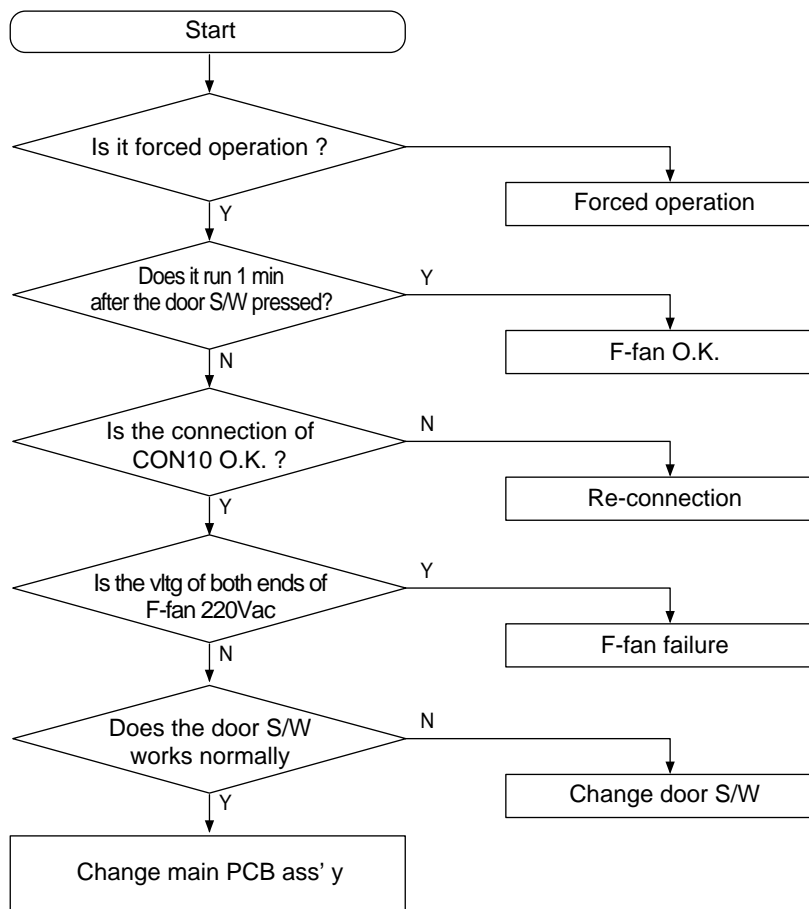

## 9-5 In case of swing fan in the refrigerator doesn't run.

### references

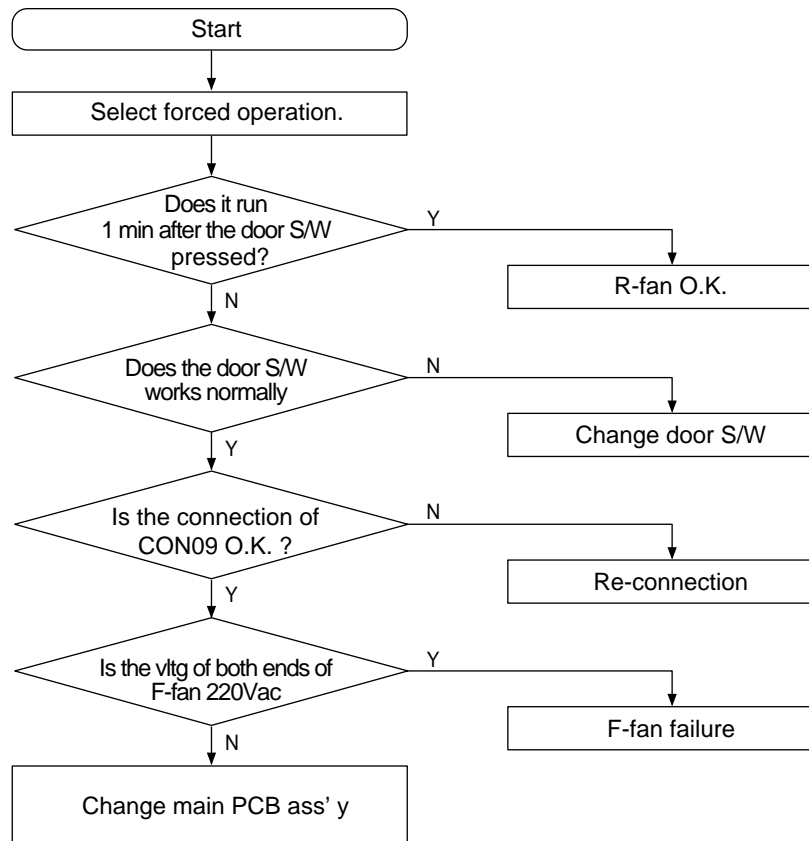

1. Swing fan doesn't run at the off state of R-fan. ( door closed)
2. Swing fan runs for 30 seconds when the door is open but from then it doesn't work as the door opened continuously. It's just runs for 30 seconds from the time the door is opened.

## 1) In case of F-fan doesn't run

## 2) In case of R-fan doesn' trun

## 10. Disassemble & assemble drawing and part list

### 10-1 Freezing Compartment

## 1) REGULATOR

### 3-TERMINAL 1A POSITIVE VOLTAGE REGULATORS

The MC78XX/MC78XXA series of three-terminal positive regulators are available in the TO-220 package and with several fixed output voltages, making it useful in a wide range of applications. These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation. Each type employs internal current limiting, thermal shut-down and safe area protection, making it essentially indestructible. If adequate heat sinking is provided, they can deliver over 1A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents. MC78XXI is characterized for operation from -40°C to +125°C, and MC78XXC from 0°C to +125°C

TO-220 1 2 3 1 : Input 2 : GND 3 : Output

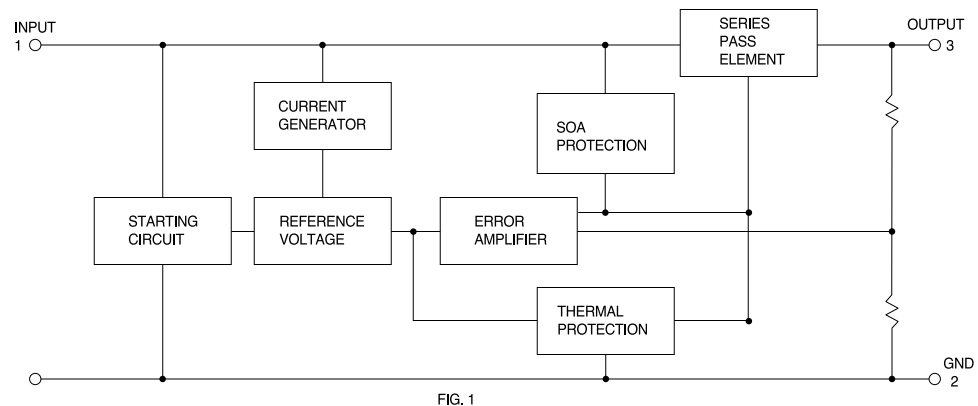

### FEATURES

- UOutput Current up to 1.5A
- UOutput voltages of 5;6;8;9;10;11;12;15;18;24V
- UThermal Overload Protection
- UShort Circuit Protection
- UOutput Transistor SOA Protection
- UNo external components required
- UOutput current in excess of 1A
- UIndustrial and commercial temperature range

### ORDERING INFORMATION

Device	Package	Operating Temperature
MC78XXCT	TO-220	0~+125°C
MC78XXACT	TO-220	
MC78XXT	TO-220	-40~+125°C

### BLOCK DIAGRAM

### ABSOLUTE MAXIMUM RATINGS

Characteristic	Symbol	Rating	Unit
Input Voltage (for $V_o = 5V$ to $18V$ )	$V_{IN}$	35	V
(for $V_o = 24V$ )	$V_{IN}$	40	V
Thermal Resistance Junction - Cases	$J_C$	5	°C/W
Thermal Resistance Junction - Air	$J_A$	65	/W
Operating Temperature Range MC78XXC/AC	$T_{opr}$	0 ~ +125	°C

MC78XXI :  $T_{min} = -40^{\circ}C$ ,  $T_{max} = 125^{\circ}C$

MC78XXC,  $T_{min} = 0^{\circ}C$ ,  $T_{max} = 125^{\circ}C$

\* Load and line regulation are specified at constant junction temperature. Changes in  $V_o$  due to heating effects must be taken into account separately. Pulse testint with low duty is used.

# HIGH-VOLTAGE, HIGH-CURRENT SOURCE DRIVERS

Dwg No A 10243

## ABSOLUTE MAXIMUM RATINGS at +25°C Free-Air Temperature

Output Voltage Range, $V_{CE}$ (UDS2981 and UDS2982H/R).....	5V to 50V
(UDS2983 and UDS2984H/R).....	35V to 80V
Input Voltage, $V_{in}$ (UDS2981 and UDS2983H/R).....	15V
(UDS2982 and UDS2984H/R).....	30V
Output Current, $I_{out}$ .....	500 mA
Ground Terminal Current, $I_{GND}$ .....	3.0A
Power Dissipation, $P_D$ (any one driver).....	1.1W
(total package).....	See Graph
Operating Temperature Range, $T_A$ .....	-55°C to + 125°C
Storage Temperature Range, $T_s$ .....	-65°C to + 150°C

Series UDS2980H and UDS2980R hermetically sealed source drivers link standard low-power digital logic and relays, solenoids, magnetic print hammers, stepping motors, LEDs, and lamps in applications requiring separate logic and load grounds, load supply voltages to +80V, and load currents to 500 mA.

Types UDS2981H/R and UDS2983H/R are intended for use with 5v logic systems(TTL, Schottky TTL, DTL and 5V CMOS). UDS2982H/R and UDS2984H/R integrated circuits are intended for MOS interface (PMOS and CMOS) operating from supply voltages of from 6 to 16V.

Types UDS2981H/R and UDS2982H/R will withstand an output OFF voltage of 50 V. UDS2983H/R and UDS2984H/R drivers will withstand a maximum output OFF voltage of 80V.

Under normal operating conditions, the devices will sustain 50 mA continuously on each of the eight outputs at an ambient temperature of +85°C and with a supply voltage of 15V. All types include input current-limiting resistors and output transient-suppression diodes. In all cases, outputs are switched ON by an active high input level.

Note that the maximum current rating may not be obtained at -55°C because of reduced beta, or at +125°C because of package power limitations.

Series UDS2980H drivers are furnished in 18-pin ceramic/metal(side-brazed) hermetic dual in-line packages. Series UDS2980R drivers are supplied in ceramic/glass(cer-DIP) hermetic packages. Both are processed to the requirements of MIL-STD-883, Class B.

The same circuits are also available in 18-pin plastic dual in-line packages (Series UDN2980A) for operation over a limited temperature range, or where higher package power dissipation is needed.

## FEATURES

- TTL, DTL, PMOS, or CMOS Compatible Inputs
- 500 mA Output Source Current Capability
- Transient-Protected Outputs
- High-Reliability Screening to MIL-STD-883, Class B
- Operating Temperature -55°C to +125°C

Always order by complete part number, e.g.,  
See table on next page for differences between devices.

UDS2981H883

		UDS2984		V <sub>IN</sub> = 5.0 V, V <sub>S</sub> = 80 V	4	10 mA
Maximum Turn-ON Delay Time	t <sub>PHL</sub>	UDS2981/82	+25°C	V <sub>S</sub> = 35 V, R <sub>L</sub> = 175	7	2.0 µs
		UDS2983/84		V <sub>S</sub> = 50 V, R <sub>L</sub> = 250	7	2.0 µs
Maximum Turn-OFF Delay Time	t <sub>PHL</sub>	UDS2981/82	+25°C	V <sub>S</sub> = 35 V, R <sub>L</sub> = 175	7	10 µs
		UDS2983/84		V <sub>S</sub> = 50 V, R <sub>L</sub> = 250	7	10 µs
Maximum Clamp Diode Leakage Current	I <sub>R</sub>	UDS2981/82		V <sub>IN</sub> = 0.25 V, V <sub>S</sub> = 50 V	5	50 µA
		UDS2983/84		V <sub>IN</sub> = 0.25 V, V <sub>S</sub> = 80 V	5	50 µA
Maximum Clamp Diode Forward Voltage	V <sub>F</sub>	ALL		I <sub>F</sub> = 200 mA	6	1.75 V

\*All inputs simultaneously.

\*\*Pused test.

\*Complete part number includes a terminal letter that indicates package (H = ceramic/metal side-brazed. R = ceramic/glass cer-DIP).

**SWITCHING APPLICATION** (Bias Resistor Built In)

- Switching Circuit, Inverter, Interface circuit Driver circuit.
- Built in bias Resistor ( $R_1=4.7K$  ,  $R=10K$  )
- Complement to KSR2005

**ABSOLUTE MAXIMUM RATINGS** ( $T_a=25^\circ\text{C}$ )

Characteristic	Symbol	Rating	Unit
Collector-Base Voltage	$V_{CBO}$	50	V
Collector-Emitter Voltage	$V_{CEO}$	50	V
Emitter-Base Voltage	$V_{EB0}$	10	V
Collector Current	$I_C$	100	mA
Collector Dissipation	$P_C$	300	mW
Junction Temperature	$T_J$	150	$^\circ\text{C}$
Storage Temperature	$T_{stg}$	-55-150	$^\circ\text{C}$

TO-92

1 Emitter 2 Collector 3 Base

**ELECTRICAL CHARACTERISTICS** ( $T_a=25^\circ\text{C}$ )

Characteristic	Symbol	Test Condition	Main	Typ	Max	Unit
Collector-Base Breakdown Voltage	$BV_{CBO}$	$I_C=10\mu\text{A}$ , $I_B=0$	50			V
Collector-Emitter Breakdown Voltage	$BV_{CEO}$	$I_C=100\mu\text{A}$ , $I_B=0$	50			V
Collector Cutoff Current	$I_{CBO}$	$V_{CB}=40\text{V}$ , $I_B=0$			0.1	$\mu\text{A}$
DC Current Gain	$H_C$	$V_{CB}=5\text{V}$ , $I_B=5\text{mA}$	30			
Collector-Emitter Saturation Voltage	$V_{CE(sat)}$	$I_C=10\text{mA}$ , $I_B=0.5\text{mA}$			0.3	V
Output Capacitance	$C_{ob}$	$V_{CB}=10\text{V}$ , $I_B=0$ $f=1\text{MHz}$		3.7		pF
Current Gain-Bandwidth Product	$F_T$	$V_{CB}=10\text{V}$ , $I_C=5\text{mA}$		250		MHz
Input Off Voltage	$V_{I(off)}$	$V_{CB}=5\text{V}$ , $I_C=100\mu\text{A}$	0.3			V
Input On Voltage	$V_{I(on)}$	$V_{CB}=0.3\text{V}$ , $I_C=20\text{mA}$			2.5	V
Input Resistor	$R_1$		3.2	4.7	6.2	K
Resistor Ratio	$R_1/R_2$		0.42	0.47	0.52	

**Equivalent Circuit**
